## EDUCATION

**City University of New York – Lehman College**
Computer Science, B.S. (January 2022)
Major GPA: 3.975

## SKILLS

| | |
|---|---|
| **Programming Languages** | Java, JavaScript, TypeScript, Python, Kotlin, SQL, Go |
| **Frameworks** | Spring, React, Vue, Next.js, Angular |
| **Databases** | MySQL, PostgreSQL, MongoDB, Couchbase, IBM DB2 |

## EXPERIENCE

**Infosys** — Dallas, TX **March 2025 - Current**
*Software Engineer*

- Earned multiple internal certifications in full stack technologies, demonstrating proficiency in Java, Spring Boot, React, Angular, Kotlin, and related enterprise development frameworks.
- Completed comprehensive training assessments, showcasing continuous learning in both backend and frontend environments.

**Revature** — Remote **September 2024 - March 2025**
*Full Stack Developer in Training*

- Completed extensive training in full stack web development, focusing on backend services using Java, Spring Boot, and AWS, and frontend technologies like React and TypeScript to build scalable applications.
- Developed two full stack web applications – a grocery e-commerce platform and a hotel booking system – ensuring clean, maintainable code and robust functionality.

**Kolibri** — Remote **May 2024 - September 2024**
*Contributor*

- Improved an open-source offline-first platform for education by fixing bugs, refactoring code, and updating API integrations using Python and Vue, enhancing platform stability and performance.

**Georgia Institute of Technology** — Atlanta, GA **August 2022 - May 2023**
*Graduate Research Assistant*

- Integrated a metric to identify low-importance stable neurons into the Neuro-inspired Stability-Plasticity Architecture (NISPA) for continual learning, supporting data-driven decision making.
- Developed a mechanism for controlled forgetting, ensuring balanced system adaptability and effective performance during incremental task learning phases.

**American Express** — Phoenix, AZ **January 2022 - August 2022**
*Software Engineer*

- Designed and implemented a new authorization management API using Java and Spring Boot to facilitate secure corporate client access to self-servicing portals.
- Optimized server configurations by leveraging historical log data to maintain platform stability and prevent service denial during peak loads.
- Developed a system to flag suspected spam and duplicate accounts, contributing to enhanced system security and performance.

**Institute for Advanced Computational Science** — Remote **June 2021 - August 2021**
*Undergraduate Research Assistant*

- Investigated the impact of initial conditions on radioactive nickel production in thermonuclear supernova simulations, contributing to scientific analysis through detailed research.
- Achieved a 13X speedup on analysis scripts by implementing a file distribution algorithm in Python with MPI4Py, demonstrating effective problem solving and code efficiency improvements.

## PROJECTS

**Physics Inventory** **August 2016 - Current**

- Designed and implemented an inventory management system serving Andrews University's Department of Physics, used daily for lab and asset management operations.
- Provided an intuitive interface for tracking assets, creating maintenance work orders, assisting with lab setup and takedown, and generating custom reports.
- Maintained and continuously enhanced the system over 8+ years, recently modernizing from Java/JavaFX to a React/Go architecture to improve user experience.

**BRECKS** **February 2024 - May 2024**

- Developed a full stack web application that allows for easily managing daily operations at construction sites, including materials needed, onsite visitors, and manpower tracking, using Java, Spring Boot, React, and MongoDB.

**Define CLI Tool** **June 2024**

- Developed a command-line tool to lookup word definitions, synonyms, antonyms, pronunciation, and usage over time using Rust, powered by the Wordnik API.
